PROJECTS

[Food](#) — *An online food ordering website*
React - Node.js - Express.js - MongoDB - Material UI

Food is a fictional full stack food ordering website. You can find various restaurants and add any items you want to your cart. Users are authenticated on the server-side.

[Miniblog](#) — *Minimalist Blog Web App*
React - Firebase Auth - Cloud Firestore - Material UI

Miniblog is a minimalist approach to a blog website. You can post or delete posts, read other posts, and follow other users. I used React and Material UI for frontend and Firebase for backend.

[Shoestore](#) — *E-commerce website*
React - Gatsby - REST API - Material UI

Shoestore is a fictional e-commerce website that let's users filter shoes by brand or color, and sort them by price.
